# NEBB Required Instrumentation (Effective January 1, 2024)

**Appendix A** - NEBB Sound Level Meter and Acoustic Calibrator Instrumentation Minimum Calibration Data

## 1.0 Introduction:

NEBB allows for ANSI S1.4 Type 1 or Type 2 meters; which, minimally have full octave band filters sets. There are two general configurations of SLM and filter set instruments used by NEBB firms; an older SLM with an external filter set which attaches to the SLM and more modern SLM / Real Time Analyzer, which has the filters built into the instrument. Most NEBB firms use modern instruments, SLM / Real Time Analyzer.

The amplitude tolerances for Type 1 and 2 meters are different in each octave band. Therefore, there are two sets of compliance tables; one set for Type 1 / Class 1 instruments and one set for Type 2 / Class 2 instruments. The two sets cannot be combined, since, some NEBB firms have Type 1 instruments which are required for government work.

Additionally, many of the newer Real Time Analyzers have both full and third octave band filter sets. The NEBB S&V certification is to measure and report sound levels, which are in the form of overall A-weighted levels (overall dBA) or data input to Noise Criteria (NC) and /or Room Criteria (RC) curves. Both of which only use full octave band data. Therefore, the minimum calibration information is for full octave bands only.

As a matter of procedure for calibration of SLM / Real Time Analyzers, the information listed below is the minimum number of calibration check test points which must be on a calibration certificate.

## 2.0 Notes

**A.** Smartphones with sound level meter and/or octave band filter analysis are not acceptable or approved as NEBB instrumentation for sound measurement.

# 3.0 Acoustic Calibrators / Sound Level Meters / Real Time Analyzers

### **3.1 Calibration Tolerances and Minimum Data** (ANSI S1.4)

The data listed in Tables 3-1.2.1 and 3-1.2.2 are minimum performance checks on a sound level meter, with the meter set in the overall sound level mode. The data in Tables 3-1.2.1 and 3-1.2.2 is **not** to be used to assess compliance of filter sets. Tolerance parameters for filter sets (analog or digital) is presented in Tables 3-1.2.2 and 3-1.2.3.

Table 3-1.1: Acoustic Calibrator Performance Tolerances

Parameter	Type / Class 1	Type / Class 2
Amplitude	±0.55 dB	±0.95 dB
Frequency	±1.3%	±2.3%

#### Table 3-1.2.1: Overall Meter Performance Tolerances

Acoustical Parameter Check	Type 1	Type 2	
Overall SPL Accuracy	±0.7 dB	±1.0 dB	
Fast Response	-1 ±1.0 dB	-1, (+1, -2) dB	
Slow Response	-4.1 ±1.0 dB	-4.1 ±2.0 dB	
Linearity	±0.4 dB	±0.6 dB	
Noise Floor	Note 1	Note 1	

Note 1: 5 dB below manufacturers minimum published level.

#### Table 3-1.2.2: Type 1 Octave Band Frequency Response.

Frequency (Hz)	A-weighted Relative Response Level dB	Tolerance Limit dB	C-weighted Relative Response Level dB	Tolerance Limit dB	Z-weighted Relative Response Level dB	Tolerance Limit dB
31.5	-39.4	±1.5	-3.0	+/-1.5	0.0	+/-1.5
63	-26.2	± 1	-0.8	+/-1	0.0	+/-1
